

IT-11-25

Digital Transformation in Refineries

February 3 - 13, 2026

Course Coordinator: Hideki Miyazaki, Akiyoshi Noguchi

<Contents>

A training program was conducted for engineers engaged in instrumentation and information system operations at oil companies in various countries. The program was designed to help participants systematically learn the theory and application of AI technology utilizing deep learning, as well as to gain insights into the latest ICT applications in refineries.
